
A. AI VIDEO

Clip 1: What Is Agentic AI?

Prompt Used

Create a 10-second educational video using the provided image as the exact visual reference for the teacher.

The teacher is explaining the basic concept of Agentic AI to beginners and speaks directly to the camera in a professional modern technology classroom.

The teacher says:

"Agentic AI is AI that works toward a goal. It can plan steps, use tools, take actions, and check the results."

Animate the teacher naturally while she speaks:

- accurate lip synchronization
- natural facial expressions
- subtle natural hand gestures
- slight natural body movement
- professional presenter behavior
- smooth camera movement

As the teacher explains the concept, show simple educational visuals representing:

GOAL → PLAN → TOOLS → ACTION → RESULT

Animate each concept sequentially as it is mentioned.

Use a clean modern blue technology aesthetic, professional lighting, readable typography, and polished educational motion graphics.

Do not generate long paragraphs or small text.

Keep all on-screen labels short, large, and readable.

Do not duplicate labels.

Ensure all text is correctly spelled.

Maintain the exact same teacher appearance from the reference image throughout the entire clip.

Duration: exactly 10 seconds.

Why I chose this prompt

This clip introduces the fundamental idea of Agentic AI to beginners. The **Goal** → **Plan** → **Tools** → **Action** → **Result** sequence gives viewers a simple mental model of how an AI agent operates.

How I improved it

I simplified the visual text and requested only short labels because AI-generated video text can become distorted when too much information is included. I also specified the teacher's appearance and natural animation to maintain consistency.

Clip 2: How an AI Agent Works

Prompt Used

Create a 10-second educational video using the provided image as the exact visual reference for the teacher.

The same teacher continues explaining Agentic AI to beginners and speaks directly to the camera.

She says:

"An AI agent follows a loop: it plans, acts, observes the result, and adapts its next step."

Animate the teacher naturally:

- accurate lip synchronization
- natural facial expressions
- natural hand gestures
- subtle body movement
- professional presenter behavior
- smooth camera movement

Show a simple animated agentic loop beside the teacher:

GOAL → PLAN → ACT → OBSERVE → ADAPT → PLAN

Animate each stage sequentially as the teacher explains it.

Use only short, large, readable labels.

Do not generate paragraphs or small text.

Do not duplicate labels.

Keep all text clear and correctly spelled.

Use the same professional modern technology classroom and visual style as Clip 1.

Maintain the exact same teacher appearance, hairstyle, clothing, and overall visual identity from the reference image.

Duration: exactly 10 seconds.

Why I chose this prompt

The second clip builds on the definition from Clip 1 by explaining the **iterative loop** of an AI agent. It shows that an agent can observe results and adapt instead of simply producing a one-time answer.

How I improved it

I used a simple circular workflow and limited the on-screen text to five short concepts. I also explicitly required the same teacher, classroom, clothing, and visual identity for consistency across the video.

Clip 3: Real-World Example of Agentic AI

This is the final clip and brings the concepts into a practical example.

Prompt Used

Create a 10-second educational video using the provided image as the exact visual reference for the teacher.

The same teacher continues explaining Agentic AI to beginners and speaks directly to the camera.

She says:

"For example, a travel agent can research flights, compare hotels, build an itinerary, and adjust the plan based on your preferences."

Animate the teacher naturally:

- accurate lip synchronization
- natural facial expressions
- natural hand gestures
- subtle body movement
- professional presenter behavior
- smooth camera movement

Beside the teacher, show a simple animated travel-planning workflow:

USER GOAL

↓

RESEARCH

↓

COMPARE

↓

PLAN

↓

CHECK

↓

FINAL ITINERARY

Show simple visual icons for:

- airplane / flights
- hotel
- map
- calendar
- final travel plan

Make the visuals demonstrate that the AI agent performs multiple connected actions to achieve the user's goal.

Use only short, large, readable labels.

Do not generate paragraphs or small text.

Do not duplicate labels.

Keep all text clear and correctly spelled.

Use the same professional modern technology classroom and visual style

as Clips 1 and 2.

Maintain the exact same teacher appearance, hairstyle, clothing, and overall visual identity from the reference image.

Duration: exactly 10 seconds.

Why I chose this prompt

The final clip gives viewers a practical example of Agentic AI. A travel-planning scenario demonstrates how an agent can perform several connected tasks while working toward one overall goal.

How I improved it

I used a familiar real-world example rather than introducing another technical concept. The workflow shows multiple actions connected to a single user goal, making the previous two clips easier to apply to a practical situation.

B. INFOGRAPHICS

Infographic 1: Basic

Prompt Used

Create a professional educational infographic titled:

"AGENTIC AI: THE BASICS"

Audience: beginners and students.

Explain Agentic AI in a simple, visually engaging way.

Include a short definition:

"Agentic AI is AI that can pursue a goal through multiple steps, using tools, taking actions, and checking results."

Create a clear section called:

"KEY CONCEPTS"

Show these five concepts vertically with clean icons:

1. GOAL

What needs to be achieved?

2. PLANNING

Break the goal into smaller steps.

3. TOOLS

Use external tools such as search, APIs, and databases.

4. ACTION

Execute the planned steps.

5. OBSERVATION

Check the result and decide what to do next.

At the bottom, include a simple comparison:

TRADITIONAL AI

Question → Answer

AGENTIC AI

Goal → Plan → Tools → Action → Observe → Repeat

Use a modern technology education style, clean typography, readable text, professional blue and cyan accents, subtle gradients, simple illustrations, and a friendly AI robot.

Make the information easy to scan and understand.

Do not use paragraphs of tiny text.

Do not add unrelated information.

Ensure every heading and label is spelled correctly.

Portrait infographic format suitable for PNG/PDF submission.

Why I chose this prompt

This infographic introduces the basic concepts of Agentic AI for beginners. The comparison between traditional AI and Agentic AI makes the difference easy to understand visually.

How I improved it

I organized the information into five simple concepts and added a process flow. I also explicitly requested readable text and limited unnecessary information to keep the infographic clear.

Infographic 2: Intermediate

Prompt Used

Create a professional educational infographic titled:

"INSIDE AN AI AGENT"

Subtitle:

"How an AI Agent Works"

Audience: students with basic knowledge of Agentic AI.

Explain the internal workflow of a single AI agent.

Start with:

USER GOAL

Example: "Plan a study schedule"

Then show the agent workflow clearly:

1. UNDERSTAND GOAL

Interpret the request and gather relevant context.

2. MEMORY & CONTEXT

Use previous steps, conversation history, and relevant stored information.

3. PLANNING

Break the goal into smaller steps and decide what should happen next.

4. TOOL USE

Interact with external resources such as:

- Web Search
- APIs
- Databases

- Code Execution

5. OBSERVE

Check and analyze the result returned by the tool.

6. EVALUATE

Ask:

"Was the result correct?"

"Do we need more information?"

7. NEXT ACTION

If the goal is not complete, plan and execute another step.

If the goal is complete, produce the final result.

Show the process as a continuous visual loop:

USER GOAL

↓

UNDERSTAND

↓

PLAN

↓

USE TOOLS

↓

OBSERVE

↓

EVALUATE

↓

NEXT ACTION

↪ back to PLAN

At the bottom, include:

"Agentic AI = Goal + Planning + Tools + Observation + Evaluation + Iteration"

Use a professional technology-education design with clean flowcharts, readable typography, modern AI illustrations, subtle gradients, and consistent icons.

Make this infographic visibly more advanced than a beginner infographic.

Do not use tiny text.
Do not overcrowd the design.
Do not add unrelated concepts.
Ensure every heading and label is spelled correctly.
Portrait format suitable for PNG or PDF submission.

Why I chose this prompt

This infographic moves beyond the definition of Agentic AI and explains the internal workflow of a single agent. It introduces memory, tools, observation, evaluation, and iteration.

How I improved it

I represented the process as a continuous loop rather than a simple linear flow. This visually demonstrates that an agent can evaluate results and decide on another action.

Infographic 3: Advanced

Prompt Used

Create a professional educational infographic titled:

"AGENTIC AI SYSTEMS"

Subtitle:

"From Single Agents to Multi-Agent Architecture"

Audience: students who already understand the basics of Agentic AI.

Explain how multiple specialized AI agents can collaborate to solve complex tasks.

Start with:

USER REQUEST

Example:

"Research and create a travel plan for Europe"

Then show:

ORCHESTRATOR AGENT

- Understands the overall objective
- Breaks the task into subtasks
- Assigns work to specialized agents
- Coordinates the workflow

Show three specialized agents:

1. RESEARCH AGENT

- Searches for information
- Gathers relevant data
- Analyzes sources

2. PLANNER AGENT

- Breaks information into a structured plan
- Decides task sequence
- Optimizes the approach

3. EXECUTION AGENT

- Uses APIs and external tools
- Performs actions
- Produces intermediate results

Show these agents communicating through:

SHARED STATE / MEMORY

- Stores intermediate results
- Shares information between agents
- Maintains context and progress

Then add:

EVALUATOR AGENT

- Checks quality and correctness
- Detects missing information
- Provides feedback

Show a feedback loop:

EVALUATE

↓

IMPROVE / ITERATE

↓

Agents perform additional work

↓

EVALUATE AGAIN

Finally:

FINAL OUTPUT

"Complete, structured response for the user"

At the bottom, include a section:

"ADVANCED CONCEPTS"

Show five concepts:

TOOL ORCHESTRATION

Coordinate multiple tools and services.

MEMORY MANAGEMENT

Maintain context and intermediate state.

MULTI-AGENT COLLABORATION

Specialized agents work together.

GUARDRAILS & SAFETY

Control actions and reduce unsafe behavior.

HUMAN-IN-THE-LOOP

Allow human feedback or approval for critical decisions.

Use a polished professional technology-education design.

Use clear architecture diagrams, arrows, icons, readable typography, and a consistent visual hierarchy.

Make this infographic visibly more advanced than the Basic and Intermediate infographics.

Do not use tiny text.

Do not overcrowd the design.

Do not add unrelated concepts.

Ensure every heading and label is spelled correctly.

Portrait infographic format suitable for PNG or PDF submission.

Why I chose this prompt

The advanced infographic demonstrates how multiple specialized agents can collaborate on a complex task. It introduces orchestration, shared memory, evaluation, iteration, safety, and human oversight.

How I improved it

I increased the complexity progressively from a single agent to a multi-agent architecture. Specialized roles such as Research, Planner, Execution, Orchestrator, and Evaluator make the collaboration easier to visualize.
